Who We Are?

Greshan is a Web Technology company headquartered in India (Coimbatore). We have expanded our wings in the field of Website development, Mobile App development, SEO and Software development. We believe in our quality work, as per the expectation of the clients. We design and develop with complete dedication and involvement, which results in creative and innovative websites. We are a team of smart working people with 8+ years of experience in this technology, will help you to bring your dream website and mobile app to reality. We fulfill the needs of our clients by giving them more than their expectation and our main goal is to maintain a good relationship with our clients.

Our Service Offerings are

-  **Website Development**
-  **Mobile App Development**
-  **SEO & Digital Marketing**
-  **Software Development**

Website Development:

To develop your business to next level by both in popularity and revenue, you need to shine over your competitors to get more business; we will help you to attain this by designing and developing your website with innovation, which will reach the people needs easily. We have expertise in C#, Asp dot-Net, PHP, CMS (Wordpress, Joomla, Drupal and Magento), MVC, SQL Server and WCF. We design and develop in such a way that you get your website more than what you think at the exact time.

Mobile App Development:

Mobile Apps are ruling the whole world in each and every field of market. At present all are using smart phones and everything is in our door step, this is because of the mobile app. If you have your own app; your customers can buy and book through online in your app, which will increase your standard of business. We can help you to build an app with creativeness on your expectation and we have expertise in every platform of mobile apps like iOS and Android and PhoneGap.

SEO & Digital Marketing:

SEO

SEO will help your business to be a brand; you can reach more number of people by White Hat i.e., by using organic method, which is the formal and legal way to do SEO. We have expertise team to handle ON Page on one hand and other side we have OFF Page, these are the two major sources of SEO. Content plays an important role in SEO, content can express your work to the viewers which ultimately brings more traffic.

Digital Marketing

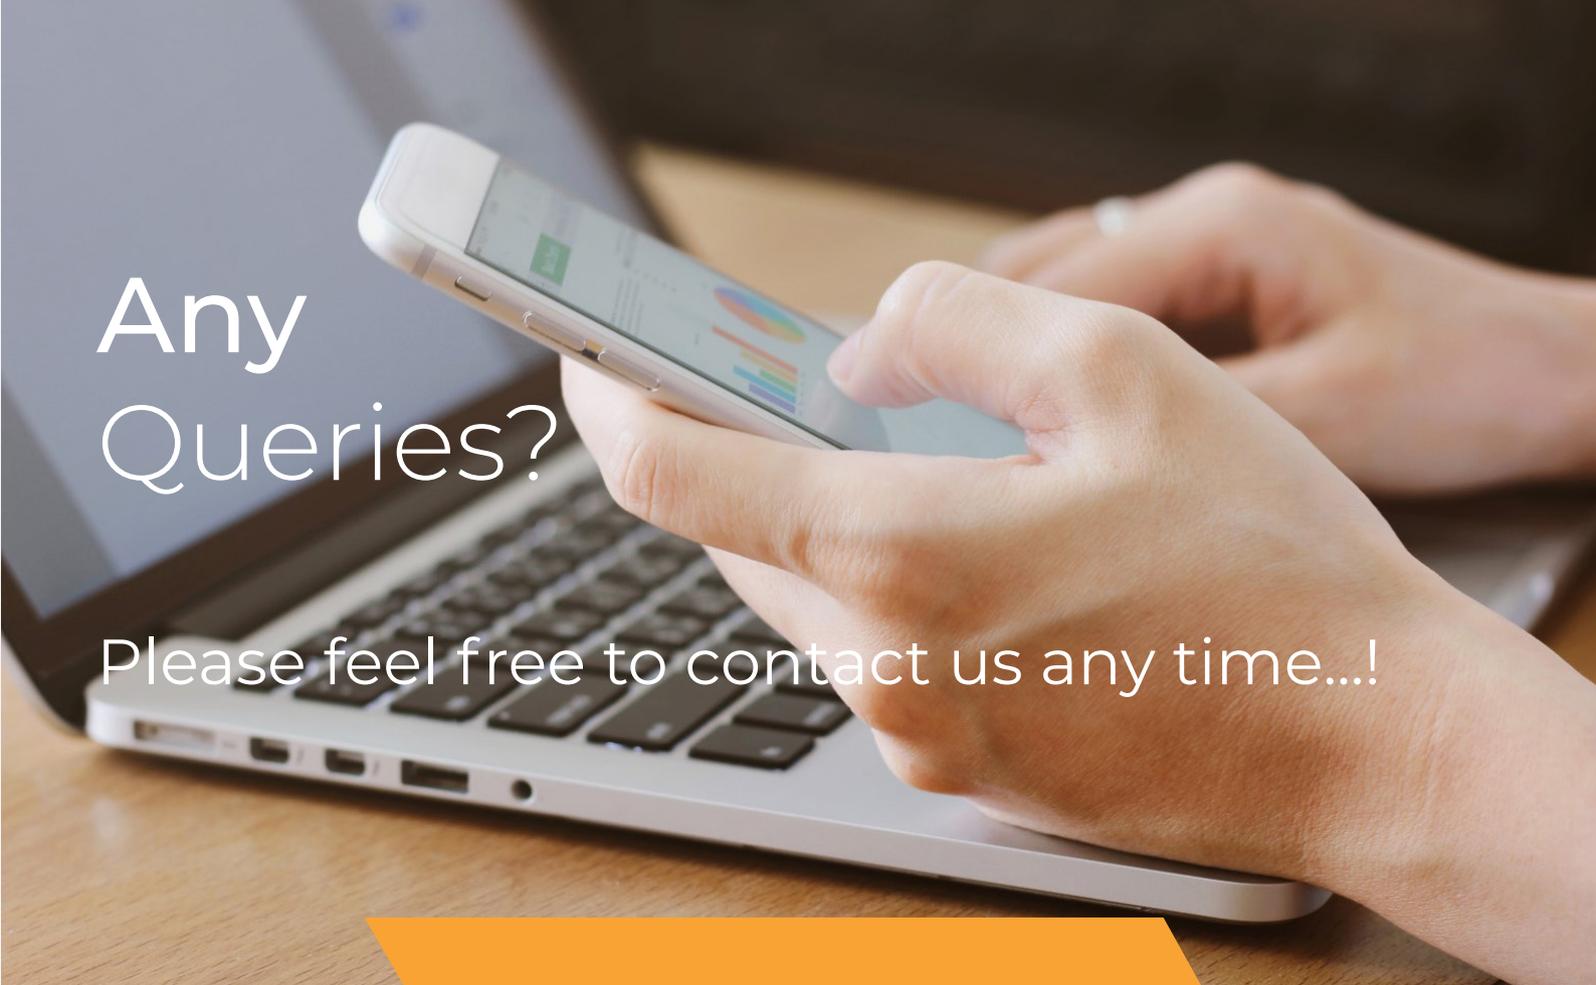

It is modern and technical method to recognize your presence in Social Medias. Digital marketing is the most trending method to be in globe presence. It is also known as viral market or people view market, where people reviews are given more importance.

Software Development:

Software is one of the important tools for every company to maintain their details and other information's properly and correctly. Now-a-days software's are used in every sectors of the organization to lesser the work of the employees. We analyze the client requirements and build them the software what they exactly think to develop and deliver it when they need. We have the ability to design and develop the software's which the client think they can't do and we make it possible.
